Atherectomy (Inpatient Care) - What You Need to Know

Atherectomy is a minimally invasive endovascular surgery technique for removing atherosclerosis from blood vessels within the body. It is an alternative to angioplasty for the treatment of peripheral artery disease, but the studies that exist are not adequate to determine if it is superior to angioplasty.

Atherectomy - Wikipedia

An atherectomy is a procedure to remove plaque from an artery (blood vessel). Removing plaque makes the artery wider, so blood can flow more freely to the heart muscles. In an atherectomy, the plaque is shaved or vaporized away with tiny rotating blades or a laser on the end of a catheter (a thin, flexible tube).
