Pulse radar sends several waves which tend to return a single large echo that can display as one target. Broadband Radar therefore provides a far clearer display and enables detection of smaller floats or buoys in the water. Broadband Radar is a marketing name for what engineers call frequency-modulated continuouswave (FMCW) radar.

The technology, long used in military radar and recently available for commercial use, is roughly similar to CHIRP sonar. Solid-state, broadband radar sends a continuous transmission wave with linear increasing frequency (hence the term broadband). The wave retains its frequency as it travels out and reflects back from objects.
