Busch Vacuum Pump Manual

The vacuum pump is intended for the suction of air and other dry, non-aggressive, non-toxic and non-explosive gases. Conveying of other media leads to an increased thermal and/or mechanical load on the vacuum pump and is permissible only after a consultation with Busch. The vacuum pump is intended for the placement in a non-hazardous environment.

Busch Vacuum

This manual is designed to help optimize pump performance and reduce downtime through proper maintenance. Instructions are given for complete disassembly and assembly. A separate Installation and Operation manual is provided with each new pump from the factory. Refer to it for general operation and installation guidelines.

MAINTENANCE AND REPAIR MANUAL - Vacuum Pumps, Vacuum ...

In case the vacuum pump is equipped with a gas ballast (optional) water vapour within the gas flow can be tolerated within certain limits (page 8: Conveying Condensable Vapours). The conveyance of other vapours shall be agreed upon with Busch. The vacuum pump is intended for the placement in a non-potentially explosive environment.

The machine works on the one-stage, twin-screw pump principle. Two screw rotors are rotating inside the cylinder. The pumped medium is trapped between the cylinder and screw chambers, compressed, and transported to the gas out-let. During the compression process, the two screw rotors do not come into contact with each other nor with the cylinder.

COBRA Instruction Manual - Busch Vacuum

If more than one vacuum pump or a receiver tank is connected to a common main line, each pump should have its own manual or automatic operated shut-off valve or positive action check valve. The built-in, anti-suck-back valve should not be used as a shut-off valve for the vacuum system. Remove the plastic protective cap from the inlet port
