Crutchfield Speaker Wire Guide

By Doug Newcomb, Mike Mettler . Part of Car Audio For Dummies Cheat Sheet . When wiring your car audio system, using the proper gauge wire for an amplifier is critical. To avoid problems and get the best sound, determine the fuse ratings of your amplifiers and their distance from the battery and refer to the following chart to determine the proper power-wire gauge.

Wire Gauge Chart for Car Audio Systems - dummies

Two-conductor wire is self-explanatory, but four-conductor speaker wire is handy for running cable to a wall-mounted volume control, or for using a single run of cable to connect two speakers in different parts of a room ("stopping off" at the first speaker to attach two conductors, and then continuing the run to attach the other two ...

Learn About Choosing The Right Type & Gauge Of Speaker Wires

Figuring out the speaker wires can be a little more complicated. If the remaining wires are in pairs, where one is a solid color and the other is the same color with a line, then each pair typically goes to the same speaker. You can test this by connecting one wire in the pair to one end of your AA battery and the other end to the other terminal.

Car Stereo Wiring Color and Identification Basics

If you're after the absolute easiest way to add more bass to your car audio system, then a powered amplifier with speaker-level inputs is the way to go. These units combine an amp and a subwoofer into one unit, so there isn't any guesswork, and they can be hooked up to any factory or aftermarket head unit.

Beginner's Guide to Car Audio Systems

To calculate the proper power and ground cable sizes, find the distance of the power cable along the top row. If your measurement is between two measurements, use the higher one. Next, find the total RMS power the cable must support on the left. If your measurement is between two measurements, use the higher one.

Recommended Power and Ground Cable Sizes & Speaker Wire ...

In the case of speaker wires you'll normally see choices of 12-gauge, 14-gauge, 16-gauge and 18-gauge, with the smaller numbers thicker than the larger numbers. That means 12-gauge (12AWG) speaker wire is much thicker than 18-gauge (AWG) wire, so if you're looking for the thickest wire you'd want 12AWG. (Yes, 10AWG would be even thicker, but then you start running into other problems with capacitance and signal quality which we're not going to get into here.)
