well. While no hard and fast rule applies that says “always do this” for portraits – it is generally more flattering for your subject to use soft light. Hard light will accentuate everything by adding contrast – that means wrinkles, lines, pores, etc – things that most people do not want enhanced.

### **Quality of Light - What is it? How do you use it?**

As you practice seeing the qualities of light, also notice the direction of the light. Notice where the highlights and the shadows on various subjects appear. Walk around your subject and notice any differences you see. And look at any details in the subject and note if they are emphasized or made less apparent by the direction of the light.

### **Direction of Light in Photos - Photography Know How**

Unlike quantity, there's no device to measure light quality. When we discuss the quality of light, we are talking about how “hard”

is all about light. I consider you have found the holy grail. I award you a gold Medaille for this smart presentation. Thank you.

### **book: Direction & Quality of Light - Tangents**

The direction your most intense light (commonly called the key light) comes from determines where your primary shadows will fall. In other words, if you want to mimic sunlight coming in through a window, you don't want to place a hard light directly above your subject. You also want to consider the effect that direction has on your subject.

### **The Four Attributes of Light - Videomaker**

The direction of the light creates highlights and shadows. Highlights are the brightest part of an image. Conversely, a shadow is the darkest part of an image. The contrast between shadows and highlights is what makes an image interesting.

## **How to Use Light in Photography: 11 Steps (with Pictures)**

Before learning the different types of natural light, let's look at the four main characteristics that are used to categorize them—color, intensity, direction, and quality. Color Temperature Color temperature refers to the various shades of color that are produced by different light sources.

## **The beginner's guide to natural light and how to use it to**

...

Light rays change direction when they reflect off a surface, move from one transparent medium into another, or travel through a medium whose composition is continuously changing. The law of reflection states that, on reflection from a smooth surface, the angle of the reflected ray is equal to the angle of the incident ray.
