Lifespan development is a modifiable process that is amenable to intervention. Biological and environmental influences are embedded in age-graded, history-graded and non-normative contexts. Interestingly, however, the Lifespan Developmental Approach has not been widely disseminated or implemented across the other subspecialties within psychology.

## **Disability Across the Developmental Life Span: For the ...**

Disability resulted in substantial and sustained declines in life satisfaction. More important, people who became disabled in young adulthood (aged 18–39 years) and old age (aged 65 and older) reported stronger declines in life satisfaction in the year within disability and were less likely to adapt in the years thereafter.
