Engine Cooling System Diagram Pontiac

Early Pontiac V-8 Engine Cooling. By Larry Gorden December 2007. Beginning with the first production engines in 1955, Pontiac V-8 engines were cooled by reverse flow meaning the cooling water enters and cools the heads first and then some of the water enters the block and cools the cylinders.. In 1960, Pontiac abandoned the reverse flow system in favor of "conventional" flow where cooling ...

Pontiac Grand Am Replacement Engine Cooling Parts - CARID.com

From 1955 to 1959, Pontiac had used a cooling system (and some GM motors still use it today) where the coolant was sent to the heads first and then down through the block. The idea behind "reverse flow" was to keep the heads cooler because of the large problem with engines in the 50s burning up and warping the valves.
