Explanation: of the Earth's surface is water, but only is fresh water. Considering just the fresh water, only about is accessible to humans in the form of lakes, rivers, and other drinking sources. That is only .007% of the Earth's water. This is the basis for the clean water crisis that faces Earth's population.

Water Problems and Solutions - AP Environmental Science

Cities create challenging environments for many nonhuman species, and the presence of nonhumans in cities influences the health and well-being of the humans with which they share the environment. Distinct urban conditions are created by landscape modification, but the history of this transformation is not equal across urban environments. Schell et al. review how systematic racist practices ...

The ecological and evolutionary consequences of systemic ...

In the long term, food systems must heed natural resource limits. Localized production and dietary changes are often suggested as potential solutions. However, no U.S. analyses fully evaluate the feasibility to scale localization across a range of diets. We therefore modeled the biophysical capacity for regional food systems based on agricultural land area and productivity, population, and 7 ...
