Eradication of a new infestation of the native Asian apple snail *Pila conica* was accomplished in Palau by manually collecting the snails from the infested pond, which was then covered with a layer of oil; the pond probably also was infested with a species of *Pomacea*, probably *P. canaliculata*, as pink egg masses were reported (Cowie, 2002). This is the only report of eradication of any apple snail species and was only possible because a very small area (a single pond) was infested.
