Powder coat adheres best to clean bare metal. Dirt, oils, and other contaminants left on a powder coated part can cause adhesion issues including complete delamination of the coating, and visual issues such as specks, bumps, or fish eyes visible in the coating.

Powder Coating: The Complete Guide

As the parts to be coated are grounded, the powder is attracted towards the part via the electrostatic process. Once the powder is applied the parts are cured in an oven, which melts and cross-links the powder over the surface of the part and creates a tough, scratch resistant and beautiful finish.
