Evolution for High School Biology Lesson Plans - Study.com

Theory of Evolution was first described by Charles Darwin. To understand descent with modification, one needs to understand 1) the idea that current day organisms arose from older ancestral species over time; 2) Modification is a mechanism or process of interaction between the environment and an organisms to select for inheritable traits. Natural selection is one important mechanism of modification. If a species survives long enough, it has been selected naturally. The survival depends on an ...
