Internal-combustion engine, any of a group of devices in which the reactants of combustion (oxidizer and fuel) and the products of combustion serve as the working fluids of the engine. Such an engine gains its energy from heat released during the combustion of the nonreacted working fluids, the oxidizer-fuel mixture.

The combustion process in CI engine: When the fuel is sprayed into the highly heated atmosphere, a delay occurs during which the fuel particles are being evaporated. The vapor of fuel then comes in contact with the oxygen at high temperature. Thus, fuel combustion takes place and high pressure is developed.
