Induction Cooker A conventional induction cooker relies on magnetic flux coupling, which requires a cooking pan to be magnetic conductive, and thus is not suitable for aluminum cookware. Recent commercial designs combine flux coupling and conductive heating to create a universal cooking engine.

In a nutshell, using an induction cooktop is a smart thing to do if you care about electrical efficiency, speedy heating, better cooking control and higher levels of safety. As for the suitability of your existing cookware for induction cooktops, just try sticking a magnet to them. If it sticks, then the pan/pot is fit to be used! Bon appetit!
