Abstract. Using the experience of several organisations from the manufacturing and service sectors in the UK, this paper seeks to explore the management efforts put into the successful exploitation of technology. In the context of this study, information systems management (ISM) is defined as the managerial and technical strategies and competencies that significantly improve or add value to the use of information systems within an organisation.

An information management system (IMS) is a set of hardware and software that stores, organizes, and accesses data stored in a database. It also provides tools that allow for the creation of standardized and ad-hoc reports. There are numerous kinds of IMSs that can perform specialized business functions, including the following examples:

In business, management information systems (or information management systems) are tools used to support processes, operations, intelligence, and IT. MIS tools move data and manage information. They are the core of the information management discipline and are often considered the first systems of the information age.
