Emergency Medical Services

The laryngeal tube (also known as the King LT) is an airway management device designed as an alternative to other airway management techniques such as mask ventilation, laryngeal mask airway, and tracheal intubation. This device can be inserted blindly through the oropharynx into the hypopharynx to create an airway during anaesthesia and cardiopulmonary resuscitation so as to enable mechanical ...

Laryngeal tube - Wikipedia

Mouth-to-mouth, mouth-to-mask, and bag-mask ventilation are the usual alternatives rescuers could select between when waiting for an advanced airway system, which comes in the form of a supraglottic airway, laryngeal mask airway, or endotracheal tube that can provide a more stable and better way of breathing for the patient and should be inserted as early as possible in an effort to resuscitate ...

Airway Management - Online BLS Course Handbook

The oropharyngeal airway (OPA) is a J-shaped device that fits over the tongue to hold the soft hypopharyngeal structures and the tongue away from the posterior wall of the pharynx. OPA is used in persons who are at risk for developing airway obstruction from the tongue or from relaxed upper airway muscle.
