There will definitely be catalysts to accelerate the evolution to 5G beyond the eMBB and especially in the URLLC and Mission Critical use cases where the target for user plane latency should be down to 0.5ms for UL and 0.5ms for DL (and for eMBB would be 4ms for UL and 4ms for DL), as autonomous vehicle, vehicle-to-vehicle communications, use of drones or robotics, and remote surgery, just to name a few, [7]. As well, in the longer period mMTC use cases will need to address challenges for ...

- 5G will have a superior latency than the current 4G LTE mobile communications standard which improves the quality of experience of real-time applications such as VoIP, gaming, and other interactive applications. 5G has extremely low latency capabilities of less than a millisecond, which helps in massive IoT, tactical internet and other advanced robotics applications. Low latency has been recognized as an important component to enable a good mobile broadband experience.

5G is not a fixed standard, nor is 5G service something that will simply replace 4G and then continue to exist in a consistent way for the next decade. In fact, 5G is much like an organic entity ...

The Evolution of 5G

Some carriers have dubbed this 4G LTE-A or 5Ge to separate it from 4G LTE. Do 3G and 5G Phones Work on 4G Networks? 4G networks as of now are the dominant network in America, with most voice, text, and calls being handled over 4G. This isn't projected to change any time soon, with 5G mostly looking to handle data.

We're laying the 5G network foundation with 5G Evolution and LTE-LAA. In technology terms, that means we're upgrading cell towers with LTE Advanced features like 256 QAM, 4x4 MIMO, and 3-way carrier aggregation. These technologies serve as the runway to 5G by boosting the existing LTE network and priming it for the future of connectivity.

Setting the Record Straight on 5G Evolution
