Lubricants And Additives For Polymer

Lubricants as additives for polymers assist the movement of one object passing another object. Their primary role is to reduce friction, minimize wear and prevent overheating of parts. While wear and heat cannot be completely eliminated, reducing them to negligible or acceptable levels is must to maintain performance in your application!

Lubricants and Additives for Polymer Compounds

Fluoroguard™ polymer additives are based on a fluorinated synthetic oil and available in three distinct formulations that are colorless, odorless, and chemically inert. By acting as an internal lubricant that migrates to the polymer's surface, they enhance flow properties and process throughput while improving the finished product's wear and abrasion resistance.
