I found on the net (I think it was an MG site) someone had uploaded PDFs from a Lucas correspondence course. One of them details the workings of the RF95 Control Box, and the other documents are really interesting. The topics are: 1. Batteries 2. Starter Motors 3. Ignition 4. Generators 5. Control Boxes 6. Wiring circuits & looms 7. Lighting 8.

RF95/2 12 volt control box - Old Classic Car

These electronic solid-state regulators are compatible with all Lucas-type generators (dynamos) which use "B", "grounded field", or "P" type regulators. They have current limits ranging from 5 amps to 25 amps. This includes the common C40, C39, and all others found on Triumph, MG, Healey, and sundry other vehicles.

Advanced Dynamo Regulators

INTRODUCTION Both the Lucas Compensated Voltage and Current Voltage regulating systems are covered in the accompanying pages of this publication. In the explanation of the working of Lucas generator output control units, certain abstruse technical considerations have been deliberately omitted, but these factors do, of course, have to be considered by Lucas engineers when designing the equipment.
