Biopharmaceuticals are routinely freeze-dried to improve product stability and, thereby, achieve acceptable commercial shelf life. However, freeze-drying is a unit operation coupled in formulation and process. While selection of excipients is primarily focused on improving product stability, for a freeze-dried product an additional consideration is the compatibility of the formulation with the ...

Practical Considerations for Near-Zero Margin Network Design and Deployment. Maximizing the delivered capacity of optical transponders by mining the Signal-to-Noise Ratio (SNR) margin to a near-zero level is critical for the economic viability of future optical networks. This paper examines this trend from the equipment design point of view and applies Artificial Intelligence (AI) to the problem of capacity maximization.
