Prevalence Of Temporomandibular Joint Disorders

The prevalence of temporomandibular joint and muscle disorder (TMJD) is between 5% and 12%. Unusual for chronic pain conditions, the prevalence rates of TMJ disorders are higher among younger persons. TMJ disorders are at least twice as prevalent in women as men, and women using either supplemental estrogen or oral contraceptives are more likely to seek treatment for these conditions.

Gender Difference in Prevalence of Signs and Symptoms of ...

TMJ disorders — a type of temporomandibular disorder or TMD — can cause pain in your jaw joint and in the muscles that control jaw movement. The exact cause of a person's TMJ disorder is often difficult to determine. Your pain may be due to a combination of factors, such as genetics, arthritis or jaw injury. Some people who have jaw pain also tend to clench or grind their teeth (bruxism), although many people habitually clench or grind their teeth and never develop TMJ disorders.

TMJ disorders - Symptoms and causes - Mayo Clinic

The prevalence of Temporomandibular joint disorders was found to be 25.4% in the present study, which is quite significant. It indicates that quite a high number of patients may be suffering from temporomandibular joint disorders in the given populace. Also, the presentation of signs and symptoms is quite diverse.
