### Solutions!

I am a fan of Rudin's books. This one "Real and Complex Analysis" has served as a standard textbook in the first graduate course in analysis at lots of universities in the US, and around the world. The book is divided in the two main parts, real and complex analysis.

Rudin's Real and Complex Analysis is my favorite math book. I've studied it thoroughly as an undergrad/early grad student when I was training to be a research mathematician working in complex and harmonic analysis. Like much of Rudin's other writings, this book is written from an advanced perspective.

Complex functions that are differentiable at every point of an open subset of the complex plane are said to be holomorphic on.In the context of complex analysis, the derivative of at is defined to be  $f'(z) = \lim_{\Delta z \rightarrow 0} \frac{f(z + \Delta z) - f(z)}{\Delta z}$ ,  $\in \mathbb{C}$ . Superficially, this definition is formally analogous to that of the derivative of a real function.
