A Survey is defined as a research method used for collecting data from a pre-defined group of respondents to gain information and insights on various topics of interest.

Quantitative Research: Definition, Methods, Types and ...

Research is based on logical reasoning and involves both inductive and deductive methods. The data or knowledge that is derived is in real time from actual observations in natural settings. There is an in-depth analysis of all data collected so that there are no anomalies associated with it. Research creates a path for generating new questions.

What is Research- Definition, Types, Methods & Examples

The primary purposes of basic research (as opposed to applied research) are documentation, discovery, interpretation, and the research and development (R&D) of methods and systems for the advancement of human knowledge. Approaches to research depend on epistemologies, which vary considerably both within and between humanities and sciences.
