Understanding Sensory Processing Disorder

Sensory Motor Activities The foundation of growth, development, and learning in a child starts with sensory and motor interaction with the world. The brain is built from the bottom up and this starts with movement and sensory exploration.

Sensory - Motor - Brain Balance

Children need good visual-motor integration to be able to copy basic shapes(diagonal lines, circles, squares, triangles, intersecting lines) beforethey are able to learn to form their letters correctly. Visual motor integration delaysmay cause a child to struggle to copynumbers and letters correctly.

Making Sense Out of Sensory Processing Disorder

Sensory-motor coupling is the coupling or integration of the sensory system and motor system. Sensorimotor integration is not a static process. For a given stimulus, there is no one single motor command. "Neural responses at almost every stage of a sensorimotor pathway are modified at short and long timescales by biophysical and synaptic processes, recurrent and feedback connections, and learning, as well as many other internal and external variables".
