Abstract. The SEI has been conducting research and development in various aspects of risk management for more than 20 years. Over that time span, many solutions have been developed, tested, and released into the community. In the early years, we developed and conducted Software Risk Evaluations (SREs), using the Risk Taxonomy.

1. Introduction Software risk management is a very complex and critical job in software project development. The software risk management study<sup>1,2</sup> showed that industry-wide, only 16.2% of software projects are on time and on budget. The rest of the, 52.7% are delivered with reduced functionality and 31.1% are cancelled before completion.

Risk Management Activities. Risk management consists of three main activities, as shown in fig: Risk Assessment. The objective of risk assessment is to division the risks in the condition of their loss, causing potential. For risk assessment, first, every risk should be rated in two methods: The possibility of a risk coming true (denoted as  $r$ ).
