Stochastic Calculus for Finance evolved from the first ten years of the Carnegie Mellon Professional Master's program in Computational Finance. The content of this book has been used successfully with students whose mathematics background consists of calculus and calculus-based probability. The text gives both precise statements of results, plausibility arguments, and even some proofs, but more importantly intuitive explanations developed and refine through classroom experience with this ...

binomial model as seen from the uniqueness of solution of equation (1.1.3)-(1.1.4). Finally, we note the wealth equation (1.2.14) can be written as $X_{n+1} = X_n(1+r) + \Delta_n [S_{n+1} - (1+r)S_n]$ This leads to a representation by discrete stochastic integral: $X_e^T = X_0 + \Delta \int_0^T S_e$; where $X_e^n = X_n(1+r)^n$ and $S_e^n = S_n(1+r)^n$, $n = 1, 2, \dots, N$. Exercise 1.1.
