The supply chain in Figure 1 consists of five stages. Generally, multi-stage models for supply chain design and analysis can be divided into four categories, by modeling approach. In the cases included here, the modeling approach is driven by the nature of the inputs and the objective of the study. The four categories are:

Supply Chain Design and Analysis: Models and Methods

The focus of Supply Chain Engineering is the engineering design and planning of supply chain systems. There exists a very large variety of supply chain system types, all with different goals, constraints, and decisions, but a systematic approach for the design and planning of any supply chain can be based on the principles and methods of system engineering.
