Digital transformation — the use of technology to radically improve performance or reach of enterprises — is a hot topic for companies across the globe. Thanks to digitization, companies across industries are racing to migrate “analog” approaches to customers, products, services, and operating models. Some companies are redesigning their capabilities and operating models to take full advantage of digital technologies to keep step with the “connected” consumer – BtB and BtC.

### The real challenges of digitization is not technology

Four key challenges to digitization. Transformation of the Core Business. Digitization shatters every business model at its core. Manufacturers become service providers. Customers become users. And products are absorbed into ecosystems. An OEM does not just produce cars anymore. He distributes navigation, entertainment and security services.

### The key challenges of digitization

Digitization. If there's one major buzzword in today's global supply logistics, it may be digitization. But the movement toward an end-to-end (E2E) digitally-driven supply stream is more than simply the flavor of the day; rather, it represents a fundamental shift in the way planners and managers oversee and deploy their planning and production processes.
