In streams are the green algae (Chlorophyta), red algae (Rhodophyta), blue-green algae (Cyanobacteria) and diatoms (Bacillariophyta). Green algae: Green algae often look like strands of green hair flowing in the current. Spirogyra is a common green alga.

Freshwater algae: Native plants

The varied and often beautiful forms of freshwater algae have long held a fascination for naturalists and professional scientists alike, particularly those involved in monitoring and managing the freshwater environment. This Flora provides the first modern account and identification guide to more than 2200 species of freshwater algae found in the British Isles (excluding diatoms), the majority of which also have a world-wide distribution.

Freshwater Harmful Algal Blooms 101 | NRDC

Blue-Green Algae is a bacteria but it can photosynthesize like a plant. It grows in thin layers, that as they get thicker can be removed in slimy, smelly sheets. The most common variety in freshwater is a really vivid green but it can also be reddish or brown. This is a BAD guy it can take over your tank and it is hard to get rid of.

Freshwater Aquarium Algae • How to Identify, Treat & Prevent

The British freshwater algal flora is probably still much under-recorded, however, especially in the far west of Ireland and Scotland. The present scarcity of phycologists with taxonomic training in Britain and Ireland means that a near complete list is unlikely in
