Circuit Board Builder: Eagle Pcb Gcode Setup

The PCB- gcode plugin allows to create the G-code files for patterning the top copper tracks, bottom copper and also that relating to the drilling of the base created with the freeware program EAGLE. It also allows to define the extension of the file that must be exported (.nc) so that it is compatible with Repetier -Host.

How to Transform your 3D Printer in a CNC MILLING MACHINE

pcb-gcode Since 2003, I have written and maintained pcb-gcode, a plugin for the Eagle schematic capture and board layout program. Pcb-gcode generates gcode to be used by a CNC router or milling machine to cut out tracks in a printed circuit board, as well as drill holes for components, cut the board out, and even engrave text.

The gcode from Carbide Copper is very basic but it some machines may need additional codes add or some lines removed. We may add a way to do this in future releases but that's not available in the first release. Is support available? Support is available for Carbide 3D customers via email and phone, or in our forum. Will it do two-sided PCB's?
