### 8 Stages of Human Development - InfoBarrel

Erik Erikson's theory of the stages of human development. Developmental psychologist Erik H. Erikson ( 1902-1994) was best known for his theory on social development of human beings, and for coining the phrase identity crisis. The theory describes eight stages through which a healthily developing human should pass from infancy to late adulthood. In each stage the person confronts, and hopefully masters, new challenges.

### Erikson's Stages of Human Development - Psychologist World

Sigmund Freud divided personality development into five stages: oral, anal, phallic, latent, and genital. What makes these stages controversial is that each stage is, according to Freud, associated with sexual pleasure. The psychosexual theory of personality development is basically shaped and driven by libido or sexual energy.

### 5 Stages of Human Development By Sigmund Freud - Psych Lens

\*Erikson's theory proposes eight stages of human development. Each stage is characterized by a different conflict that must be resolved by the person. When the environment makes new demands on people, the conflicts arise. \*The person is faced with a choice between two ways of coping with each crisis, an adaptive, or maladaptive way.

### Perspective on Erik Erickson's 8 stages of human development

The first stage of human development is obviously the conception. At this stage of development, a human being is not yet a human. In fact, after the fertilization period, it is called an organism. Thereãs no apparent resemblance of the human image.
