Thermodynamics: the study of energy, energy transformations and its relation to matter. The analysis of thermal systems is achieved through the application of the governing conservation equations, namely Conservation of Mass, Conservation of Energy (1st law of thermodynamics), the 2nd law of thermodynamics and the property relations.

A system is a region containing energy and/or matter that is separated from its surroundings by arbitrarily imposed walls or boundaries. In a thermodynamic analysis, the system is the subject of the investigation.

THERMODYNAMICS

Faculty of Mechanical

Engineering, UiTM 2 □

The science of energy,

that concerned with

the ways in which

energy is stored within

a body. □ Energy

transformations -

mostly involve heat

and work movements.

□ The Fundamental law

Access Free Thermodynamics Mechanical Engineering Notes

is the conservation of energy principle: energy cannot be created or destroyed, but can only be transformed from one form to another.
