### BD Vacutainer Lithium Heparin Plastic Blood Collection Tubes

BD Vacutainer tubes are irradiated to achieve sterility. These tubes are sterile on the interior only. We cannot recommend re-sterilizing the tubes, i.e., ETO (ethylene oxide) or autoclaving, primarily due to pressure changes that take place during the re-sterilization cycle.

### General BD Vacutainer® Blood Collection Tubes FAQ - BD

Description The PAXgene® Blood RNA Tube is intended for immediate stabilization of intracellular RNA, thereby yielding accurate and reproducible gene expression data. It is part of the PAXgene Blood RNA System that integrates the key steps of whole blood collection, intracellular RNA stabilization, and RNA purification.

### PAXgene® Blood RNA Tube - BD Biosciences

Description BD Vacutainer® PPT™ is a closed system allowing separation and storage of undiluted EDTA plasma in the primary blood collection tube. It is intended for the purposes of molecular diagnostic testing.

### BD, Vacutainer®, PPT™, Plasma, Preparation, Tube, IVD - BD ...

BD swab-based collection and transport systems are used for the collection and transport of specimens to the microbiology laboratory for organism recovery.

### Specimen Collection - BD

Description BD Vacutainer® CPT™ is a fully-closed system for separation of mononuclear cells from whole blood, where cell separation is carried out in the primary blood collection tube. This decreases the complexity of steps for mononuclear cell separation, thereby minimizing variability from sample processing.
